

Data Cleaning Interview Questions - Simple Answers

1. What are Missing Values?

Missing values are empty or unavailable values in a dataset.

2. How do you handle Duplicate Records?

We remove duplicate records using **drop_duplicates()**.

3. What is the difference between dropna() and fillna()?

- **dropna()** removes rows containing missing values.
- **fillna()** replaces missing values with a specified value.

4. What is an Outlier?

An outlier is a value that is much higher or lower than the normal range of data.

5. What is Standardization?

Standardization is the process of converting data into a consistent format.

6. How do you handle Date Formats?

We use **pd.to_datetime()** to convert dates into a consistent format.
