

Data Cleaning Report: Netflix Dataset

This report summarizes the data cleaning and preprocessing steps performed on the *Netflix Movies and TV Shows* dataset to ensure data quality for analytical tasks.

1. Overview of Actions

Process	Description
Duplicate Removal	Eliminated redundant entries to maintain 8,807 unique records.
Column Renaming	Standardized headers to <i>snake_case</i> (e.g., <i>date_added</i>).
Date Standardization	Converted date strings into a uniform YYYY-MM-DD datetime format.
Text Formatting	Cleaned trailing/leading whitespace in text-heavy columns.

2. Conclusion

The dataset is now clean, validated, and optimized for subsequent Exploratory Data Analysis (EDA). All deliverables (CSV files and summary) are available for your project submission.
